

AETNA

HEDIS REFERENCE TOOL

HRT

Aetna is the brand name used for products and services provided by one or more of the Aetna group of companies, including Aetna Life Insurance Company and its affiliates (Aetna).

The HEDIS Reference Tool serves educational purposes and may not encompass all details about HEDIS Measures. The content within this document is sourced from the National Committee for Quality Assurance (NCQA) Technical Specifications for HEDIS Measures. Its primary aim is to equip providers and their affiliates with a comprehensive grasp of HEDIS measures and associated information.

What is HEDIS®?

What is HEDIS?

The Healthcare Effectiveness Data and Information Set (HEDIS®) comprises standardized performance metrics established by the National Committee for Quality Assurance (NCQA) to assess, report, and benchmark quality within healthcare plans. NCQA formulates HEDIS® measures through a committee composed of purchasers, consumers, health plans, healthcare providers, and policymakers.

HEDIS Scores:

The significance of scores lies in their role within the evolving landscape of healthcare quality standards. With state and federal healthcare systems shifting towards quality-driven practices, HEDIS rates hold increasing importance for both healthcare plans and individual practitioners. State healthcare purchasers utilize compiled HEDIS rates to assess the effectiveness of health insurance providers in enhancing preventive health initiatives for their members. Additionally, these scores are employed to gauge the efficacy of preventive care efforts at the physician level. Ultimately, HEDIS scores play a pivotal role in determining the rates for incentive programs that reward providers and practices with enhanced premiums.

Strategies to Enhance HEDIS Performance:

- Ensure the prompt and accurate submission of claim/encounter data for all services provided.
- Document services in the relevant section of the medical or electronic health record, ensuring alignment with the date of service and any pertinent results.
- Utilize CPT II billing codes to optimize scores for laboratory work, screenings, and tests.
- Deliver timely and suitable healthcare services, including scheduling annual wellness appointments and providing necessary preventative screenings based on gender, age, and medical condition.
- Proactively reach out to members overdue for care, arrange necessary services, and offer telehealth consultations when face-to-face appointments are not viable.
- Participate in existing initiatives and health plan programs to leverage available resources.
- Maintain up-to-date provider information to facilitate efficient communication exchanges.

- **Electronic Clinical Data Systems (ECDS)** – Healthcare organizations utilize Electronic Clinical Data Systems (ECDS) to consolidate diverse data sources, offering comprehensive insights into the healthcare services rendered to their clientele. Eligible data sources for ECDS reporting encompass Electronic Health Records, Health Information Exchange, and Registries, among others.
- **Medical Record Data** – The information taken directly from a member’s medical record to validate services rendered that weren’t captured through medical or pharmacy claims/encounters, or supplemental data.
- **Required Exclusion** – Members are excluded from the denominator of a measure based on specific diagnoses and/or procedures documented in their claims, encounters, or pharmacy data. This exclusion is implemented during the creation of the measure denominator within certified HEDIS software after processing the claims data.

Proportion of Days Covered (PDC):

According to the Pharmacy Quality Alliance (PQA), the PDC is the preferred method to measure medication adherence. The PDC is the percent of days in the measurement period covered by prescription claims for the same medication or another in its therapeutic category. The Medication Possession Ratio (MPR) is based on the sum of dispensed ‘days supplied’ over a period, whereas PDC is based on evaluation of available supply for each individual day in the period.

Line of Business/Product line

Line of Business (LOB): Identifies the reporting population

- **Commercial:** Health insurance coverage by employer sponsored insurance, private company, or entity, not by the government.
- **Dual Special Needs Plans (D-SNP):** Type of Medicare Advantage plan that covers hospitalization, outpatient medical care, and prescriptions; the costs of the plan are covered by federal and state funds. D-SNPs are for members who are eligible for both Medicare and Medicaid.
- **Individual & Family Plans (IFP):** is a policy that individuals can purchase independently to cover their medical expenses, including doctor visits, hospitalization, and prescription drugs.
- **Medicaid:** Medicaid is a joint federal and state program designed to offer healthcare coverage to eligible individuals. While each state administers its own Medicaid program, they must adhere to federal regulations set by the government. Moreover, the federal government contributes a minimum of fifty percent of the funding required for Medicaid programs across states.
- **Medicare:** A federal system of health insurance for people over 65 years of age and for people with disabilities.
- **Medicare Star:** The Star Ratings system, established by the Centers for Medicare & Medicaid Services (CMS), evaluates Medicare Advantage (Part C) and prescription drug (Part D) plans on a five-star scale, where 1 indicates the lowest score and 5 signifies the highest rating. These assessments primarily assess the quality of health plans in terms of customer satisfaction and healthcare delivery. The overarching objective of the Star Ratings system is to enhance care quality and promote better health outcomes among Medicare beneficiaries. Furthermore, this rating system aligns with CMS's mission to enhance accountability in healthcare delivery by healthcare professionals, hospitals, and other providers.

The content in the HEDIS HRT is subject to modifications in line with directives from the National Committee for Quality Assurance (NCQA), the Centers for Medicare & Medicaid Services (CMS), as well as state regulations and suggestions. It is advisable to consult the relevant agency for further billing guidance to ascertain the eligibility of codes before submission. The provided list of codes is not exhaustive and remains susceptible to alterations, deletions, or removals. This document does not serve as a substitute for professional coding standards, and additional codes that fulfill exclusion criteria or ensure numerator compliance may be necessary.

HEDIS[®] Measures A-Z

The table below facilitates navigation to the relevant HEDIS measure page, offering a breakdown of the lines of businesses associated with each measure.

Appendix

HEDIS[®] Terms

HEDIS[®] Terms

Measurement Year

In many cases, it is the current year January 1 – December 31 a service was rendered, and data collected from this timeframe is reported during the reporting year.

Reporting Year

The reporting year is the year after the measurement year. The service dates are from the measurement year, which is usually, the year prior. In some cases, the service dates may go back more than one year.

Denominator

The number of members who qualify for the measure criteria based on NCQA technical specifications.

Numerator

The number of members who meet compliance criteria based on NCQA technical specifications for appropriate care, treatment, or service.

Collection Methods

- **Administrative** – Measures reported as administrative use the total eligible population for the denominator. Medical, pharmacy and encounter claims count toward the numerator. In some instances, health plans use approved supplemental data for the numerator.
- **Hybrid** – Measures reported as hybrid use a random sample of 411 members from a health plan's total eligible population for the denominator. The numerator includes medical and pharmacy claims, encounters, and medical record data. In some cases, health plans use auditor approved supplemental data for the numerator.
